From instruction to facts

Input instruction
Navigate to the bed then find a chocolate jello
and take it and give it to me.

↓

Goals: illustrative Qwen prediction
go(bed)
find(chocolate jello, kind=object)
take(chocolate jello)
deliver(chocolate jello, to=me)

↓

Goal adapter
Preserve goal order, map identifiers, and assign fact fields

↓

step	name	target	kind	destination
1	go	bed	location	""
2	find	chocolate_jello	object	""
3	take	chocolate_jello	object	""
4	deliver	chocolate_jello	object	me

For deliver: relation="to" and value="me". Other fields not shown are empty.
